

Level Measurement

Continuous level measurement – Capacitance transmitters

SITRANS LC500

Overview

SITRANS LC500 is an inverse frequency shift capacitance level or interface transmitter for extreme and critical process conditions, such as oil and liquified natural gas (LNG) as well as toxic and aggressive chemicals and vapors.

Benefits

- Patented Active-Shield technology so measurement is unaffected by material buildup in active shield section
- Simple push-button calibration and integrated local display
- Inverse frequency approach provides high resolution
- 2-wire loop powered 4 to 20/20 to 4 mA measurement signal
- Pre-detection alarm and full function diagnostics
- High temperature and pressure resistant (optional)
- Full-function diagnostics comply with NAMUR NE 43
- Easy calibration locally or via HART (using SIMATIC PDM software)

Application

SITRANS LC500's advanced electronics provide one-step, push-button calibration and local display for easy on-site installation and setup.

The unique mechanical probe design coupled with a high performance transmitter gives superior performance in toxic and aggressive chemicals, acids, caustics, adhesives and in viscous conductive and non-conductive materials.

The SMART 2-wire transmitter has HART communications for remote commissioning and inspection.

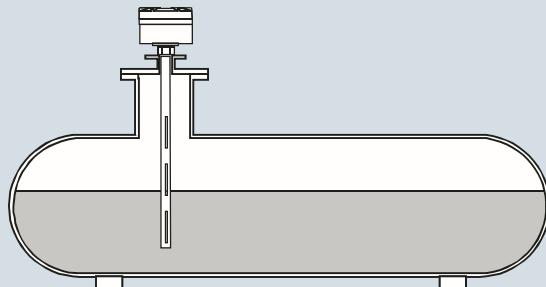

- Key Applications: Oil/water or foam/liquid interface measurement in separators or coalescers, cryogenic applications including CO₂ and liquified natural gas (LNG), distillation/regeneration tanks with high temperatures

Configuration

Installation

Build up of material or condensation in active shield area does not affect switch operation.

Mounting on non-linear vessels in non-conductive fluids using stalling well.

Technical specifications

Input	Measuring range Span	1 ... 3 300 pF Min. 3.3 pF
Output	Solid-state switch	Galvanically isolated Bipolar
• Output	• Protection	• 30 V DC • 30 V peak AC
• Max. switching voltage	• Max. load current	82 mA
• Voltage drop	• Time delay (pre or post switching)	< 1 V, typical at 50 mA 1 ... 60 s
• Loop current		3.6 ... 22 mA/22 ... 3.6 mA (2-wire current loop)
Accuracy (transmitter)		
Temperature stability		0.15 pF (0 pF) or < 0.25 % (typically < 0.1%) of actual measured value, whichever is greater over the full temperature range
Non-linearity and repeatability		< 0.1 % of range and actual measured value respectively
Accuracy		Deviation < 0.1 % of measured value
