

TEIP11-PS

I/P signal converter for standard signals

Measurement made easy

Proven and reliable concept

Compact design

- Small dimensions, low weight

Sturdy construction and solid functionality

- Influence of shock and vibration < 1% at 10 g

Variety of signal ranges

- Input, e.g., 0 ... 20 mA or 4 ... 20 mA
- Output 0.2 ... 1 bar (3 ... 15 psi)

Complies with the following directives

- EMC Directive 89/336/EEC as of May 1989
- CE mark meets the EC directive for the CE certificate of conformity

Additional temperature range

- From -40 (optional -55) ... 85 °C
(-40 (optional -67) ... 185 °F)

Ex protection approvals

- ATEX, FM/CSA, GOST for intrinsically safe and Explosion proof operation

Several different designs

- IP 20 control room housing unit for rail mounting
- IP 20 control room housing unit for block mounting
- IP 54 plastic field housing unit
- IP 65 aluminum or stainless steel housing unit

Single module

- For OEM application (upon request)

TEIP11-PS

I/P signal converter for standard signals

Concept

The TEIP11-PS signal converter converts electrical standard signals, e.g. 4 ... 20 mA to 0.2 ... 1 bar (3 ... 15 psi). It is therefore a connecting link between electrical/electronic and pneumatic systems. The signal conversion process is similar to the patented force balance method.

Special features of the TEIP11-PS signal converter are its relatively small dimensions and outstanding operational stability when subject to shock and vibration. The converter can be subjected to loads up to 10 g with less than 1% effect on function.

The housing units are available in a variety of models to meet your installation requirements. For potentially explosive conditions, units that offer intrinsically safe operation or pressure-resistant encapsulation are available with international approval certificates for use worldwide. Various ranges can be supplied on the input side and the output side for signal conversion (see information in chapter **Technical Data, page 3**) A power supply of only 1.4 bar (20 psi) of compressed air is required.

Designs

Control room housing unit for rail mounting

The control room housing unit for rail mounting is the most user-friendly and lowest priced model in the signal converter line.

A mounting base that is compatible with all commercially available EN rails is used for installation.

The housing unit with plastic cap has an IP 20 protection class.

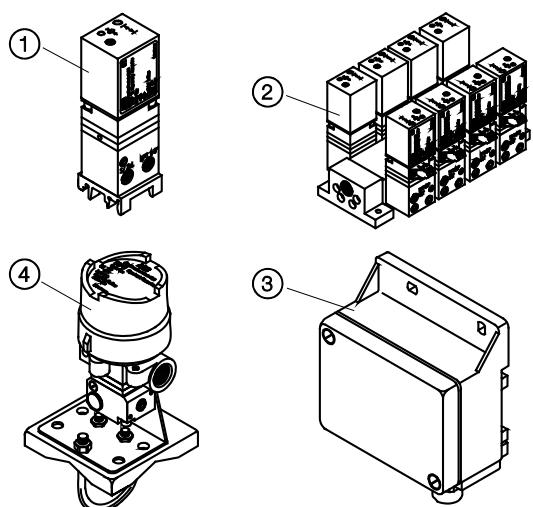

Control room housing unit for block mounting

The control room housing unit for block mounting enables you to install a number of converters in a small space. This design features central air supply via connection block and stop valves in the air connectors of the integrated signal converter. A maximum of 4 signal converters can be fitted on the connection blocks required for block mounting. If necessary, 2 or 3 (or max. 4) connection blocks can be connected to each other to create block units of 4-8-12-16 signal converters. Stop valves allow you to mount or remove individual converters during operation.

Field housing

The field housing unit is designed for installation onsite or in the field. Housing units are available in the following models (and protection classes): plastic (IP 54), aluminum (IP 65) and stainless steel (IP 65). The housing units are suitable for wall mounting and 2" pipe mounting.

A specially designed signal converter in a plastic housing unit enables the use of combustible gas as a power supply instead of the standard compressed air.

Special Requirements

The I/P converter is suitable for use in an ambient temperature range of $-40 \text{ }^{\circ}\text{C}$ to max. $85 \text{ }^{\circ}\text{C}$.

If the I/P converter is used at an ambient temperature above $60 \text{ }^{\circ}\text{C}$ or below $-20 \text{ }^{\circ}\text{C}$, use cable entries and cables suitable for a service temperature corresponding to the maximum ambient temperature increased by 10 K or corresponding to the minimum ambient temperature.

Versions with an intrinsically safe control head may no longer be used as "intrinsically safe" if they have been previously used as a flameproof type of ignition protection with a non-intrinsically-safe power supply.
