This product meets the requirements set by the Customs Union of the Republic of Belarus, the Republic of Kazakhstan and the Russian Federation.

READ THESE INSTRUCTIONS FIRST!

These instructions provide information about safe handling and operation of the valve.

If you require additional assistance, please contact the manufacturer or manufacturer's representative.

Addresses and phone numbers are printed on the back cover.

SAVE THESE INSTRUCTIONS!

Subject to change without prior notice

1 GENERAL

1.1 Scope of the manual

This manual provides essential information on series GW, Globe 3-way Diverting or Mixing type installed sliding stem valves. Actuators and positioners are only discussed briefly. Refer to the individual manuals for further information on their installation, operation and maintenance.

NOTE:

Selection and use of the valve in a specific application requires close consideration of detailed aspects. Due to the nature of the product, this manual cannot cover all the individual situations that may occur when the valve is used.

If you are uncertain about use of the valve or its suitability for your intended purpose, please contact Neles for more information.

For valves in oxygen service, please see also the separate installation, maintenance and operating instructions for oxygen service (see Neles document id:10O270EN.pdf).

1.2 Valve construction

Series GW valves are flanged (weld end available) 3-way sliding stem control valves. Two seat rings and the plug with stem is a module accessible through the bottom bonnet opening (bottom entry) of the body.

GW valves are available both diverting and mixing flow for a most primary application is in temperature control.

Our standard design combines the benefits of more strong guiding with a top and bottom seat rings, and the solid cylindrical plug makes strong support to ensure valve alignment.

GW valve is available with cylindrical plug trim and with various trim capacities.

The detailed structure is revealed by the type code shown on the valve identification plate. The type code is explained in Section 11.

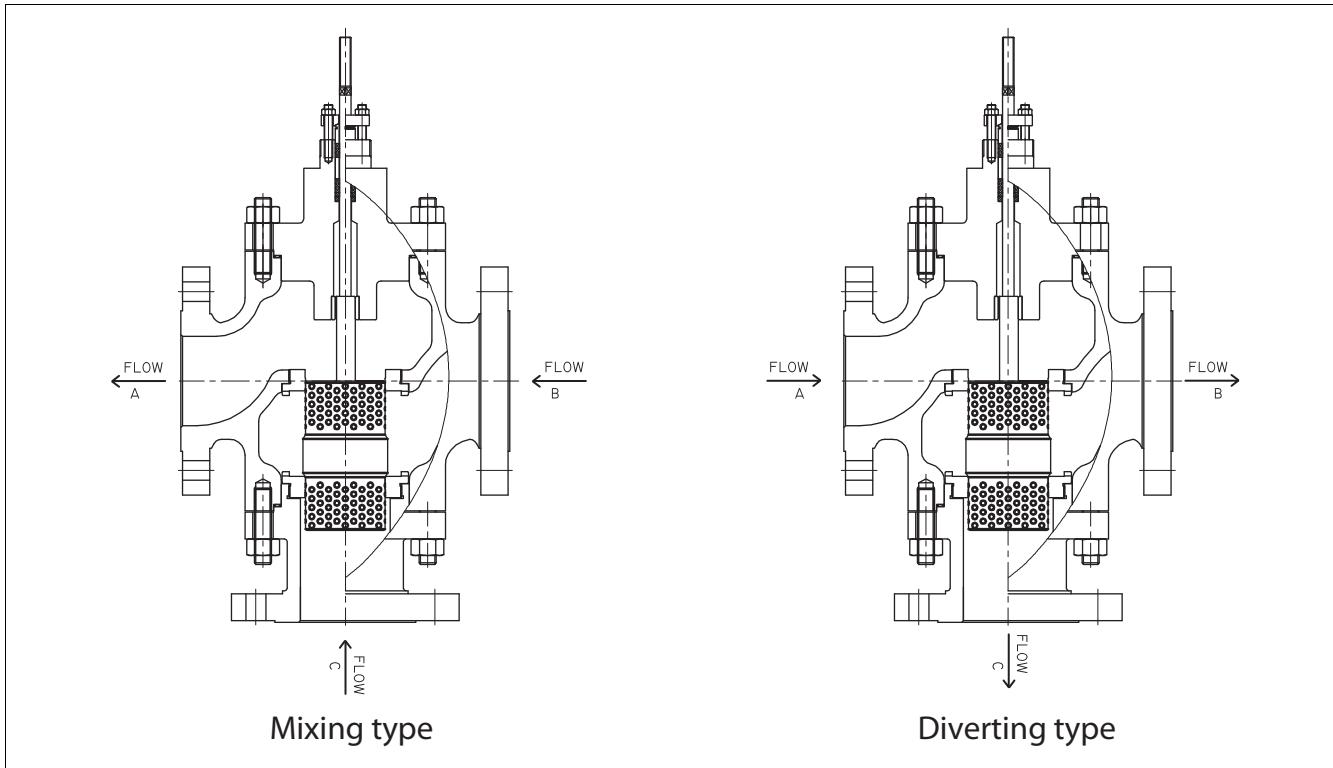

Fig. 1 Construction of the Neles GW series 3-way Valve

1.3 Valve markings

The body markings are: manufacturer's trademark, nominal size, pressure rating and material of the body. The identification plate is attached on an actuator yoke side, see Fig. 2.

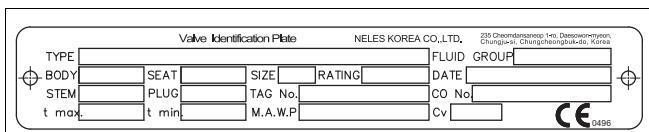

Fig. 2 Identification(name) plate example

Markings on the identification plate:

1. Type designation (Valve code)
2. Size, Rating
3. Cv
4. Body material
5. Plug, Stem material
6. Seat material
7. Temp. min./max.
8. Maximum (shut-off) pressure
9. Valve manufacturing date
10. Tag No.
11. CO No.

1.4 Technical specifications

Face-to-face length:	ANSI/ISA-75.08.01, 03, 05 & ANSI/ISA-75.08.06 (Long)
Body rating:	Class 150 to Class 600 PN 10 to PN 100
Max. pressure differential:	acc. to pressure class
Temperature range:	-196° to +425 °C
Flow direction:	indicated by an arrow on the body
Actuator mounting:	threaded bonnet with yoke nut or bolted yoke
Stem connection:	clamp with bolts/nuts
Dimensions:	see Section 10
Weights:	see Section 10
Note that the max. shut-off pressure is based on the mechanical maximum differential pressure at ambient temperature. You must always observe the fluid temperature when deciding on applicable pressure values. When selecting a valve you must also check the noise level, cavitation intensity, flow velocity, actuator load factor, etc. using Nelprof.	

1.5 Valve seat leakage class

Standard seat tightness is class II, optional trim can meet class III, ANSI/FCI 70-2.

To meet the requirement of Class IV kindly contact factory.

1.6 Recycling and disposal

Most valve parts can be recycled if sorted according to material. Most parts have a material marking. A material list is supplied with the valve. In addition, separate recycling and disposal instructions are available from the manufacturer. A valve can also be returned to the manufacturer for recycling and disposal for a fee.

1.7 Safety precautions

CAUTION:

Do not exceed the valve performance limitations!

Exceeding the limitations marked on the valve may cause damage and lead to uncontrolled pressure release. Damage or personal injury may result.

CAUTION:

Do not dismantle the valve or remove it from the pipeline while the valve is pressurised!

Dismantling or removing a pressurised valve will result in uncontrolled pressure release. Always isolate the relevant part of the pipeline, release the pressure from the valve and remove the medium before dismantling the valve.

Be aware of the type of medium involved. Protect yourself and the environment from any harmful or poisonous substances. Make sure that no medium can enter the pipeline during valve maintenance.

Failure to do this may result in damage or personal injury.

CAUTION:

Beware of the plug movement!

Keep fingers, other parts of the body, tools and other objects out of the open flow port. Leave no foreign objects inside the pipeline. When the valve is actuated, the plug functions as a cutting device. Close and detach the actuator pressure supply pipeline for valve maintenance. Failure to do this may result in damage or personal injury.

CAUTION:

Protect yourself from noise!

The valve may produce noise in the pipeline. The noise level depends on the application. It can be measured or calculated using the Neles Nelprof software. Observe the relevant working environment regulations in terms of noise emission.

CAUTION:

Beware of a very cold or hot valve!

The valve body may be very cold or very hot during use. Protect yourself against cold injuries or burns.

CAUTION:

When handling the valve or the control valve assembly, take its weight into account!

Never lift the valve or control valve assembly by the positioner, the limit switch or their piping.

Place the lifting ropes securely around the valve body (see Fig. 3). Damage or personal injury may result from falling parts.

CAUTION:

Follow the proper procedures when handling and servicing Oxygen valves.

CAUTION:

Hexavalent chromium(VI) or Cr(VI), is known to cause cancer. Be sure to use all appropriate personal protective equipment (PPE) when welding metals containing chromium.

CAUTION:

Ensure that any weld splatter does not fall onto the valve trim. This may prevent proper trim movement or damage critical seating surfaces causing leaks.

CAUTION:

Make sure the valve is not pressurized when removing the actuator.

2 TRANSPORTATION, RECEPTION AND STORAGE

Check the valve and the accompanying devices for any damage that may have occurred during transport.

Store the valve carefully before installation, preferably indoors in a dry place.

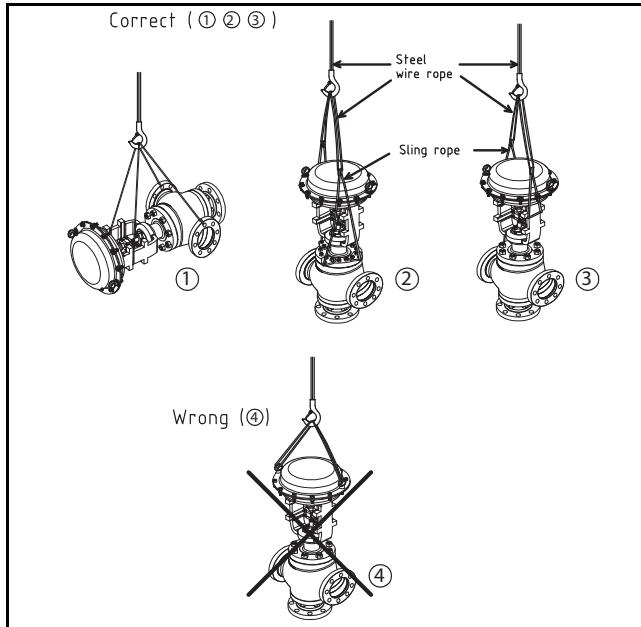

Fig. 3 Lifting the valve

Do not remove the flow port protectors until immediately before installation of the valve into the pipeline.

The valve is delivered in the closed position. A valve equipped with a spring-return actuator is delivered in the position determined by the spring.

3 VALVE INSTALLATION

3.1 General

Remove the flow port protectors and check that the valve is clean inside.

CAUTION:

When handling the valve or the control valve assembly, take its weight into account!

NOTE:

Heat insulation should be installed when valve design temperature is over 260°C to protect actuator, positioner and accessories from heat.

3.2 Installation into the pipeline

Pipeline cleaning

Make sure no foreign particles, such as sand or pieces of welding electrode, are in the pipeline, they may damage the sealing surfaces.

Installation valve

The valve has an arrow indicating the flow direction. Install the valve in the pipeline so that the flow direction of the valve corresponds to the flow direction marked on the pipe.

The mounting orientation of the valve should be vertical position as it is shown on Fig.4.

CAUTION:

Hexavalent chromium(VI) or Cr(VI), is known to cause cancer. Be sure to use all appropriate personal protective equipment (PPE) when welding metals containing chromium.

CAUTION:

Ensure that any weld splatter does not fall onto the valve trim. This may prevent proper trim movement or damage critical seating surfaces causing leaks.

NOTE:

For any other mounting position, please consult the factory.

Choose flange gaskets according to the operating conditions.

Do not attempt to correct a pipeline misalignment by means of flange bolting.

Loads on the valve body from pipeline vibrations can be reduced by supporting the pipeline properly. Reduced vibration also increases the lifetime of the positioner.

Where necessary, you can support the valve by the body, using regular pipe clamps and supports. Do not fasten supports to the valve or flange bolting or to the actuator, see Fig. 4.

Hydrostatic testing and Line flushing

When the line is hydrostatic test and flushing, the control valve should not be used as an isolating valve.

Make sure the control valve always be opened position before start this process.

Otherwise valve and trim damage or failure of the seals could result.

Flushing and hydrostatic test kit can be purchased from Neles.

CAUTION:

Flushing trim kit should be installed in the valve (especially 'Tendril' application) to protect the original trim and the flow passages while the valve installation and line flushing.

Unless this caution could result in clogging trim, low flow rates, unstable control, valve leakage and excessive noise and other trouble.

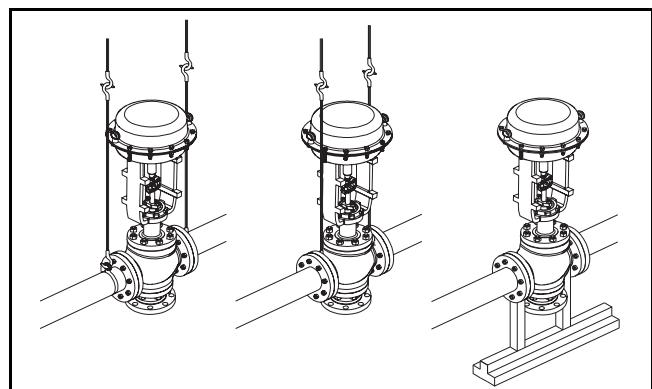

Fig. 4 Installing the control valve into pipeline using supports

3.3 Control valve assembly

Check all joints, piping and cables.

Check that the actuator stop screws, positioner and limit switches are calibrated. Refer to their installation, maintenance and operating manuals.

3.4 Valve insulation

If necessary, the valve may be insulated. Insulation must not continue above the upper level of the valve body, see Fig. 5.

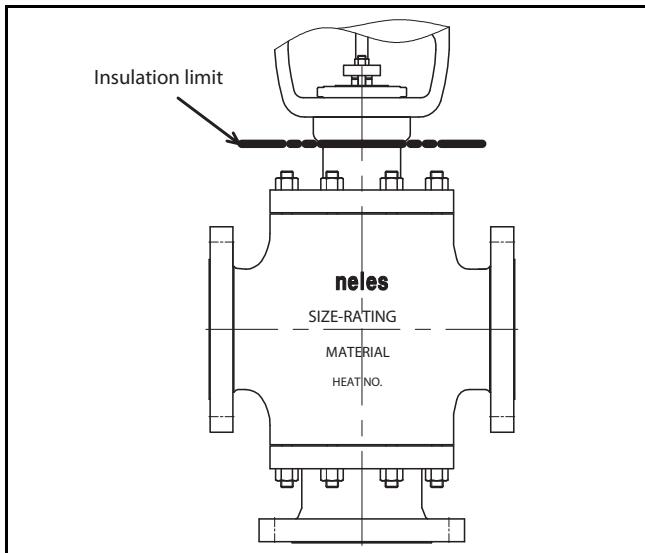

Fig. 5 Insulation of the valve

NOTE:

In case of the bellows seal bonnet construction, the gland packings are installed up at the top of the bellows bonnet(8L).

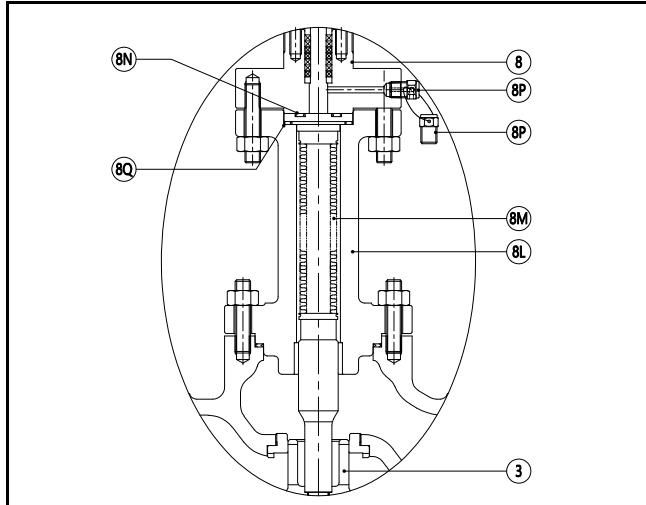

Fig. 6 Bellows seal construction

4 MAINTENANCE

CAUTION:

Observe the safety precautions listed in Section 1.7 before starting work!

CAUTION:

When handling the valve or the control valve assembly, take its weight into account!

4.1 General

The Neles series GW 3-way valves require no regular maintenance. However, check the gland packing for leakage. This section outlines the maintenance that can be carried out by the user.

The numbers in parentheses refer to the parts lists and the exploded views of the valve in Section 9.

NOTE:

If you send the valve to the manufacturer for repair, do not dismantle it. Clean the valve carefully, including the inside. For safety reasons, inform the manufacturer of the nature of the medium when you send the valve.

NOTE:

Always use original spare parts to make sure the valve functions as intended.

4.2 Gland packing adjustment & bellows seal

In the event of a packing leakage tighten the hexagon nuts (18) in $\frac{1}{4}$ turn steps each until the leakage is stopped. Do not tighten more than necessary.

CAUTION:

Bellows seal valve is shipped from the factory with a vent plug (8P) installed on the test connector. If there is any damage to the bellows, or external leakage occurred then replace the vent plug(8P) with an additional blind plug(8P) hanging. So that the fluid does not leak to the out side.

4.3 Replacing the gland packing

CAUTION:

Do not dismantle the valve or remove it from the pipeline while the valve is pressurised.

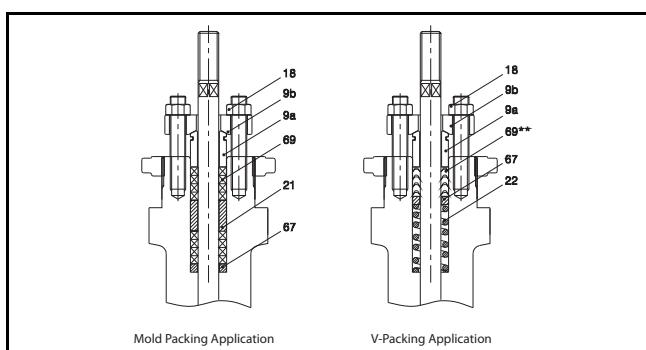

Fig. 7 Gland packing

- Make sure the valve is not pressurised.
- Remove the actuator from the valve stem according to the instructions given in the actuator manual.
- Loosen and remove the hexagon nuts (18).
- Remove the gland flange (9b), and gland (9a) up to the valve stem.
- Remove the old packing rings (69) using a pointed tool, avoid damaging the seal surfaces and valve stem.
- Clean the packing ring counterbore.

- Mount the new packing rings one by one into the packing gland box using the gland as a tool and mount the gland with hand-tightened nuts.
- Each packing ring (69) shall be firmly seated into the stuffing box using the packing tamping tool.

CAUTION:**Be carefull when using a hammer**

- Joints of successive braided type packing rings (69 & 69a if applicable) must be inserted 180 degrees against the previously inserted packing rings (69 & 69a if applicable).
- Apply lubricant suitable for process temperature to inner surface of all the packing rings except PTFE packing and emission packing. (69 & 69a if applicable).
- Apply lubricant suitable for process temperature to the gland studs (14) and nuts (18) properly.
- Fasten the gland with the hexagon nuts (18) and tighten them.
- Check leakage when the valve is pressurised.

Table 1 Required torques for bonnet nuts

Valve Size		Rating (ANSI)	Bonnet Stud Bolts		Required Torques ($\pm 5\%$ allowable)

4.4 Replacing the trim and body reassembly

NOTE:

The trim set consists of the seat rings, valve plug and stem, gaskets (for body).

- Make sure the valve is not pressurised.
- Remove the actuator from the valve stem according to the instructions given in the actuator manual and next Section 6.
- Turn the body (1) and remove the bottom hexagon nuts (17).
- Remove the bottom flange (26).
- Remove the body gasket (65).
- Remove the stem (5) and plug (3) sub-assembly. Avoid from damaging the seating and guiding line of the plug.
- Remove the each two seat rings (7 & 7a) from body (1) and bottom flange (26) using by fabricated wrenches to be engaged the seat ring lugs and adapted to shock wrench. This is threaded type, if the seat ring is extremely resistance to removal, the application of heat or penetrating oil will be helpful.
- Remove the hexagon nuts (18), gland flange (9b) and packing gland (9a) from the bonnet (8).
- Remove the old packing rings (69).
- Clean the body gasket surface.

CAUTION:

If using heating devices, insure that proper safety practices are observed. Such items as the flammability and toxicity of the controlled substance must be considered and proper precautions and permissions taken.

- Insert and tighten the each new top and bottom seat rings (7 & 7a) into the body (1) and bottom flange (26).
- Insert the stem (5) & plug (3) sub-assembly from top side into the body very carefully.
- Insert the body gasket (65) into bottom side of the body.
- Apply lubricant suitable for process temperature to the studs(13), gland studs (14), hexagon nuts(17), nuts (18), stem(5) thread area properly.
- Mount the bottom flange (26) on the body carefully maintaining alignment with the plug and stem in the closed position, so that the bonnet position in relation to the body is the same as the original position.
- Insert the hexagon nuts (17) into stud (13) and slightly fasten the nuts.

CAUTION:

Do not strongly tighten hexagon nuts (17) at this time.

CAUTION:

Do not reuse the spiral wound gaskets (65), this is need to be replace each time the valve is disassembled.

- Insert the packing rings (69) according to above 4.3

CAUTION:

The all related parts (seat ring, plug & stem, bonnet) must be properly aligned in the body.

- Tighten hexagon nuts (17) until plug and seat contact is obtained with proper bolt torque.

NOTE:

If the valve have excess leakage, the plug and seating surface need lapping and cleaning.

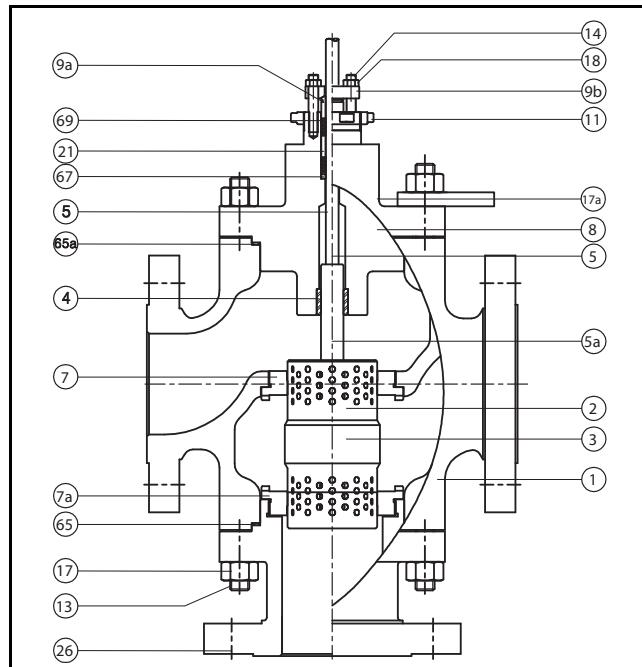

Fig. 9 Conventional Cylindrical Plug Trim

5 TESTING THE VALVE

CAUTION:

Pressure testing should be carried out using equipment conforming to the correct pressure class!

We recommend that the valve body is pressure-tested after the valve has been assembled.

The pressure test should be carried out in accordance with an applicable standard for the pressure rating. The valve must be in the open position during the test.

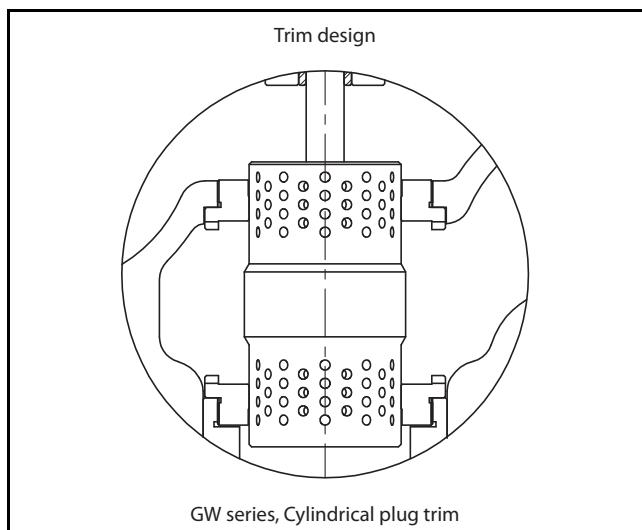

Fig. 10 Trim design

6 REMOVAL & MOUNTING THE ACTUATOR

The actuator is attached to the valve according to the manual for actuator with body assembly and plug stem adjustment . Several types of Neles actuators can be used with suitable clamps. GW valve can be assembled with VDD/R diaphragm actuator, VBD/R piston spring return actuator and VBC/VCC piston springless actuator. This IMOs explains VD actuators removal and mounting, please refer to other actuators IMOs for further information.

CAUTION:

Make sure the valve is not pressurized when removing the actuator.

CAUTION:

Beware of the plug movement!

Do not use air pressure higher than what specified on the identification plate.

NOTE:

Threaded area is required to apply lubricant suitable for process temperature to yoke nut(3**) and clamp(1**).

A. Actuator removal for Reverse <air to top seat close, stem retract> actuator (Fig. 12)

- Lift up to the valve plug 100% from the seat ring, using by specified air pressure.
- Loosen the stem lock nut (5**) and socket socket head screws (1a**) and hexagon nuts (1b**).
- Remove the clamp (1**).
- Shut off and disconnect air supply line.
- Support actuator with the suitable lifting device.
- Remove the yoke nut (3**).
- Remove the actuator from the valve body assembly.

B. Actuator replacement (mounting) for Reverse <air to top seat close, stem retract> actuator (Fig. 12)

- Mount the new or repaired actuator on top of the bonnet, using a suitable lifting device.
- Insert the yoke nut and tightly fasten the yoke by turning the yoke nut (3**) clockwise using tightening tools.
- Connect air line and accessories.
- Lift the top stem (18), using by specified air pressure.
- Adjustment stem length after clamping the clamp (1**) according to rated travel(stroke) as 'open' and 'close' position as per pressurizing and depressurizing the lower diaphragm chamber.
- Tighten stem socket head screws (1a**) and hexagon nuts (1b**) with stem lock nut (5**).

Standard valve construction

- With the handwheel or pneumatically, push the valve stem and plug to be slightly touched with seat ring to make sure if valve is fully closed.
- With the handwheel or pneumatically, stroke the actuator to the fully open.
- Measure the maximum distance between the valve stem and actuator top stem.
- Calculate the gap (measured value – rated travel = gap 1).
- Move down the top stem so that the distance between the valve stem and actuator top stem should be gap 1.
- Fit the clamp to align with both stems thread.
- Line up the stroke indicator with the clamp indicator arrow and check actuator for operation.
- Tighten the socket head screws after adjusted the rated stroke.

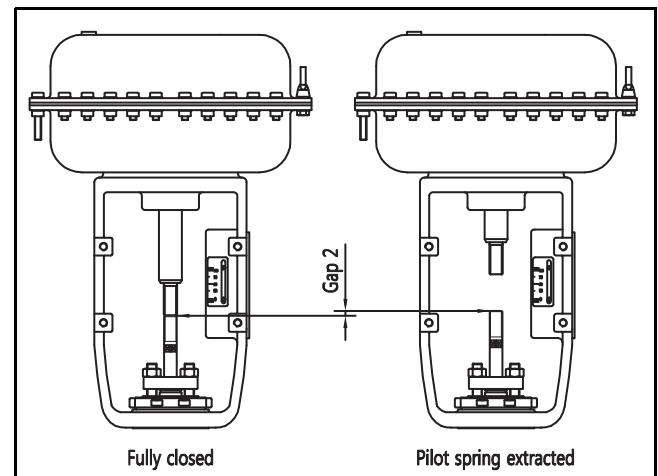

Fig. 11 Measurement of Gap 2

C. Actuator replacement (mounting)

- Mount the new or repaired actuator on top of the bonnet, using a suitable lifting device.
- Insert the yoke nut and tightly fasten the yoke by turning the yoke nut clockwise using tightening tools.
- Connect air line and accessories.
- Tighten stem socket head screws (1a**) and hexagon nuts (1b**) with stem lock nut (5**).

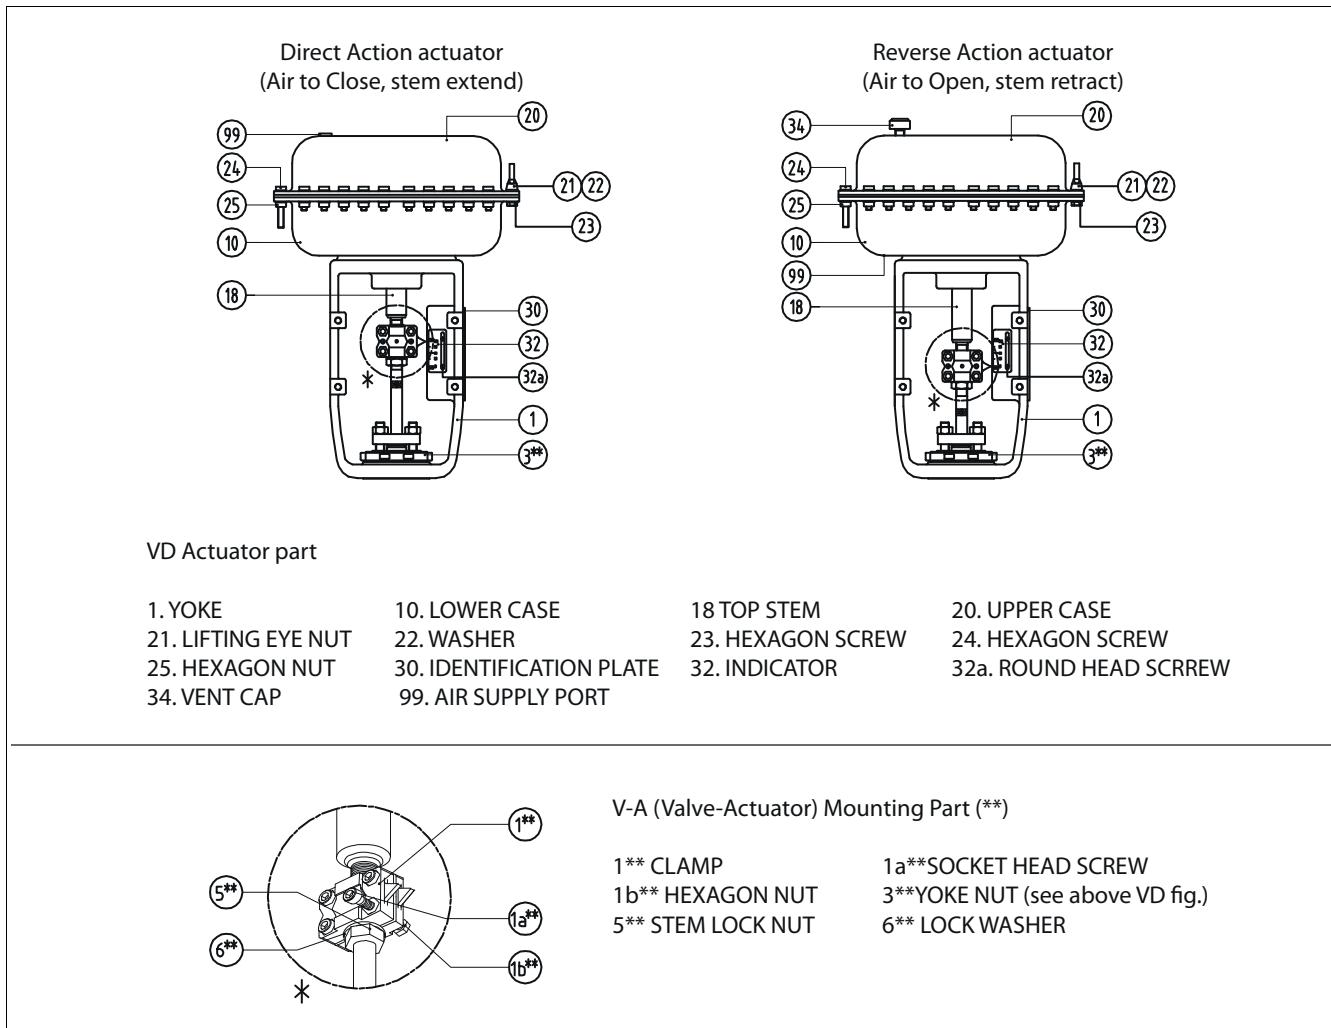

Fig. 12 VD Actuator

D. Type 'VC' Springless Cylinder, Double Acting Actuator

- This actuator is springless cylinder, double acting actuator, can use the 3/8", 1/2" NPT port according to specified on the data sheet for all air lines.
- Refer to the model VC double acting cylinder actuator manuals for further information on their installation, maintenance and operation.

CAUTION:

Avoid to turn the valve plug and stem when plug is on seat ring to prevent the seating line from being damaged.

7 TOOLS

Removal of the actuator

- L-wrench set (mm)
- Hex. socket wrench set
- Chisel and hammer (10 pound)
- +, - drivers

8 ORDERING SPARE PARTS

NOTE:

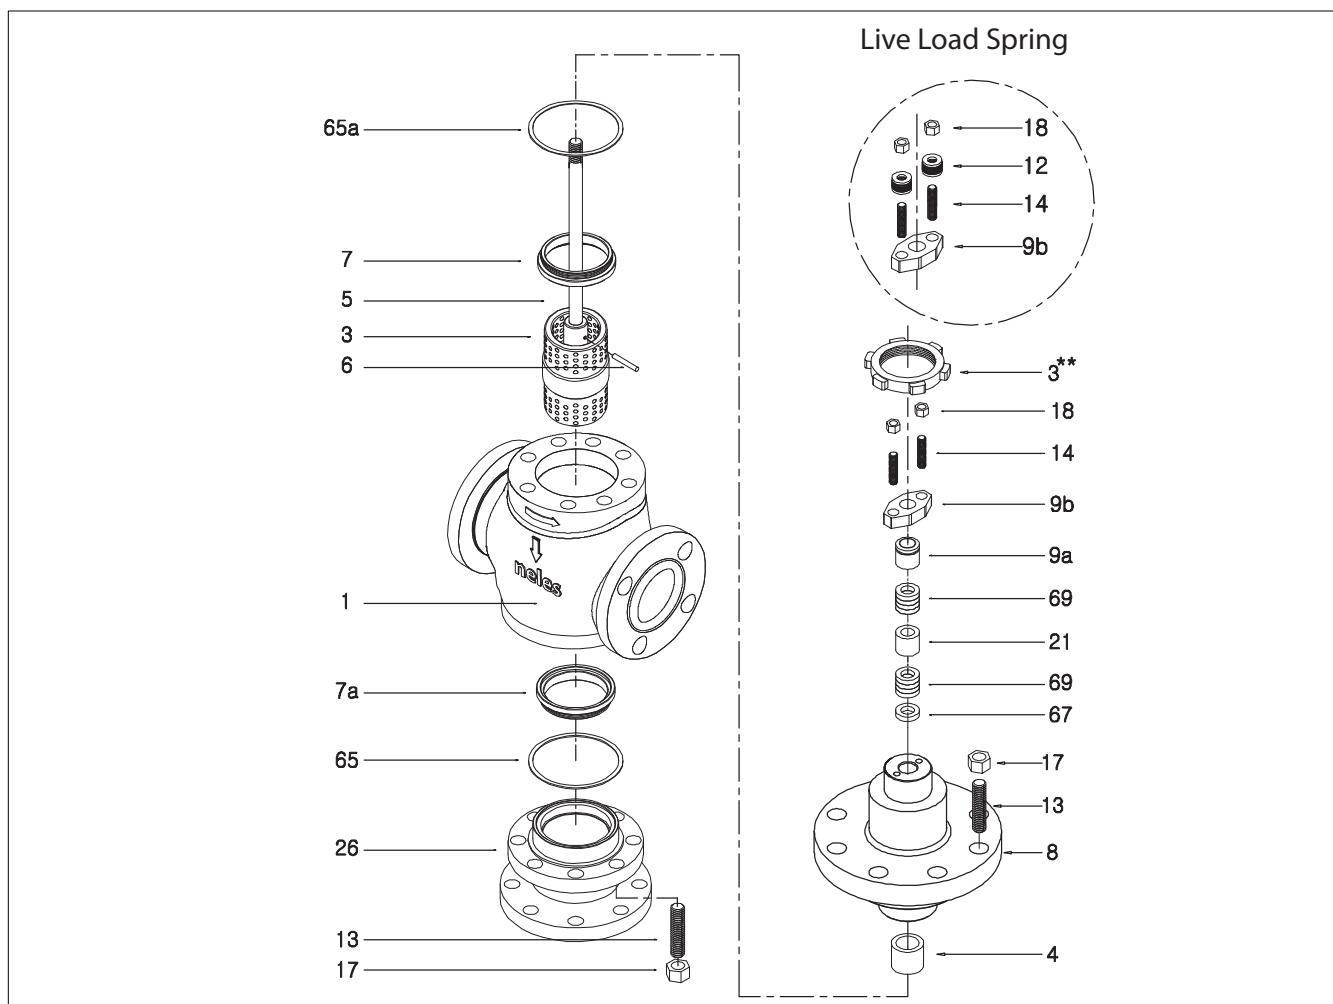

Always use original spare parts to make sure that the valve functions as intended.

When ordering spare parts, always include the following information:

- type code, sales order number, serial number
- number of the parts list, part number, name of the part and quantity required

This information can be found from the identification plate or documents.

VALVE CONSTRUCTIONS

1.	VALVE SERIES		
GW	Globe 3-way, Diverting type		
2.	BODY SIZE		
01	1" / DN 25	1H	1-1/2" / DN 40
02	2" / DN 50	03	3" / DN 80
04	4" / DN 100	06	6" / DN 150
08	8" / DN 200	10	10" / DN 250
YY	Special		

10.	STEM MATERIAL		
	Material		Description
BC	630 SS + HCr		General for carbon steel valve
TC	316 SS + HCr		General for stainless steel valve
VX	XM-19		
11.	SEAT TYPE		
S2	Double metal seat		
YY	Special		

3.	PRESSURE RATING		
C	ASME class 150	D	ASME class 300
F	ASME class 600	Y	Special
J	EN PN 10	K	EN PN 16
L	EN PN 25	M	EN PN 40
N	EN PN 63	P	EN PN 100

12.	SEAT MATERIAL		
	Seat		Description
P1	410 SS		Standard for carbon steel body
T6	316 SS		Standard for stainless steel body
YY	Special		Special materials

4.	END CONNECTION		
W	Flanged RF, ASME B16.5		
C	Flanged RF, EN 1092-1		
V	Socket welding, ASME B16.11		
Q	Butt welding, ASME B16.25		
Y	Special		

13.	SEAT APPLICATION		
X	Not applicable		
A	Cobalt based alloy		
Y	Special		

5.	BONNET CONSTRUCTION		
	Bonnet type	Actuator connection	
A	General	Applicable for VD_25/29/37	
B	General	Applicable for VD_48/55	
C	General	Applicable for VC_30, VB_32	
D	General	Applicable for VC/VB_40/50/60/70	
E	Extension	Applicable for VD_25/29/37	
F	Extension	Applicable for VD_48/55	
G	Extension	Applicable for VC_30, VB_32	
H	Extension	Applicable for VC/VB_40/50/60/70	
P	Cryogenic	Applicable for VD_25/29/37	
Q	Cryogenic	Applicable for VD_48/55	
R	Cryogenic	Applicable for VC_30, VB_32	
S	Cryogenic	Applicable for VC/VB_40/50/60/70	
Y	Special	Special	

14.	PACKING / BELLows TYPE		
S	General packing		
E	Low emission, Live loaded		
C	Bellows Seal (316L SS, Formed)		
15.	PACKING MATERIAL		
G	PTFE + Carbon fiber		
F	Graphite		
T	PTFE V-Ring		
C	PTFE + Carbon fiber (ATEX)		
H	Hi-Graphite		
Y	Special		

6.	MODEL CODE		
J2	A216 gr. WCB	S6	A351 gr. CF8M
S1	A351 gr. CF3M	YY	Special

17.	GASKET MATERIAL		
S	S/W gasket type, 316 SS + Graphite for standard		
L	S/W gasket type, 316L SS + PTFE		
H	S/W gasket type, 316L SS + Hi-Graphite		
Y	Special		

7.	BEARINGS (TRUNNION / THRUST BEARING)		
B	Model B	Y	Special

18.	STUD / NUT MATERIAL		
G	A193 gr. B7M / A194 gr. 2HM		
D	A193 gr. B8M / A194 gr. 8M		
K	A320 gr. B8M cl. 2 / A194 gr. 8M		
H	A193 gr. B16 / A194 gr. 4		
Y	Special		

19.	OPTIONS		
X	Not Applicable		
M	Globe 3-Way, Mixing type		
Y	Special		

* The body, bonnet, trim materials are subject to change as equivalent depending on detail design.

9.	PLUG APPLICATION		
X	Not applicable		
A	Cobalt based alloy		
Y	Special		

TRIM TYPE & RATED Cv

20. Sign	TRIM TYPE	21. Sign	TRIM CHARACTERISTIC	22. Sign	RATED Cv									
					Description	Body Size and Stroke								
						1" Str.	1-1/2" Str.	2" Str.	3" Str.	4" Str.	6" Str.	8" Str.	10" Str.	
A	Cylindrical plug type	L	Linear		FC	Full capacity	10 (15)	22 (20)	36 (30)	76 (40)	126 (50)	274 (60)	490 (70)	760 (70)
					1A	1-step reduction	6 (15)	14 (20)	22 (30)	46 (40)	76 (50)	168 (60)	300 (70)	460 (70)
					2A	2-step reduction	4 (15)	10 (20)	14 (30)	28 (40)	46 (50)	100 (60)	180 (70)	280 (70)
					3A	3-step reduction	2 (15)	6 (20)	10 (30)	16 (40)	30 (50)	64 (60)	120 (70)	170 (70)
Y	Special	Y	Special	YY	Special	Contact Neles for Cv details								

* Rated Cv is separated depending on the trim type & trim characteristic.

* Available other flow characteristic.

* (Str.) means the valve stroke.

* FC: Full Capacity, 1A: 1-Step reduced, 2A: 2-Step reduced, 3A: 3-Step reduced
