

# **PanaFlow Z3** Panametrics Ultrasonic Flow Meter for Liquids

The PanaFlow Z3 represents the latest generation of Panametrics ultrasonic flow meters. It is a threepath meter designed specifically for dependable, accurate and repeatable flow measurement of process liquids. With a sleek industrial design and ultra-reliable electronics, it provides operators a cost-effective choice when measurement accuracy and reliability are critical. The capabilities of the PanaFlow Z3 make it the right meter for a number of industries and applications, including:

# Industries

- Upstream, midstream and downstream oil and gas
- Chemical
- Petrochemical
- Refining
- Power generation
- District energy/HVAC
- Water/wastewater

# **Applications**

- Process control and monitoring
- Allocation measurement
- Batching and blending
- Transfer lines
- Cooling water lines
- Pipeline metering
- Loading/unloading
- Plant utilities
- Tank farms
- Irrigation
- Crude refined products

#### bhge.com

# **Features & Benefits**

No drifting, no periodic calibration required	Ħ	No loss of process control, no downtime, no expense from calibration, and optimization of assets
No pressure drop	G	No wasted energy from running a pump or need to purchase a larger size pump
No restriction in the pipe		Contamination will not affect meter's measurement (drifting) or cause any damage to meter
No filters or strainers	Y	No maintenance cost
Bi-directional measurement		No additional meters required
No moving parts	×	No loss of process control, no downtime, no expense from calibration, and optimization of assets
Field replaceable transducers	Ħ	No risk in measurement, no shutdown costs for transducer maintenance
All cast design	G	Precision machined flowcell minimizes flow disturbance for better accuracy
Explosion-proof transducer design		More power to transducers at higher voltages, less risk of attenuation in fluid
Full ultrasonic product line	Y	Meets more needs with full product portfolio; one manufacturer for ultrasonic flow meters

# Reliable flow measurement that is easy on your budget

The PanaFlow Z3 is a three-path, wetted ultrasonic flow meter that brings together all of the advantages of ultrasonic technology at a very affordable value. Unlike other flow measurement technologies, the PanaFlow Z3 does not require maintenance since it does not have any obstruction in the flow path that could clog the process line or moving parts to be damaged by the flowing fluid.

Also, due to the inherent nature of our ultrasonic flow measurement, the PanaFlow Z3's measurement is not affected by changing process conditions (temperature, pressure, and conductivity) and does not drift over time, which eliminates the requirement for periodic calibration. Without requirements for maintenance and calibration, the PanaFlow Z3 offers a low cost of ownership and performance.

## **Fast and Easy Installation**

Installation of wetted systems can be difficult and if they are not installed with precision and with close attention to detail, the reliability and accuracy of the system may not meet specifications. With the new PanaFlow Z3 system, the assembly work is done at the factory. The necessary components are already installed, so all the user needs to do is to bolt the end flanges into place.

## **Transit Time Flow Measurement**

In this method, two transducers serve as both ultrasonic signal generators and receivers. They are in acoustic communication with each other, meaning the second transducer can receive ultrasonic signals transmitted by the first transducer and vice versa.

In operation, each transducer functions as a transmitter, generating a certain number of acoustic pulses, and then as a receiver for an identical number of pulses. The time interval between transmission and reception of the ultrasonic signals is measured in both directions. When the liquid in the pipe is not flowing, the transit time downstream equals the transit time upstream. When the liquid is flowing, the transit time downstream is less than the transit time upstream.

The difference between the downstream and upstream transit times is proportional to the velocity of the flowing liquid, and its sign indicates the direction of flow.

## What is the PanaFlow Z3?

The PanaFlow Z3 consists of the Panametrics PanaFlow XMT1000 electronics, three pairs of LX transducers, and sensor body. The XMT1000 is our latest ultrasonic flow transmitter with state-of-the-art flow measurement capability in a rugged enclosure certified for use in hazardous areas. The LX transducer system is our latest advancement in ultrasonic transducer technology and provides accurate, drift-free, and obstructionless flow measurement.

LX transducer

The LX transducer system consists of our new integrated LX transducers and our uniquely engineered buffers. The design of this system allows for the safe insertion and removal of the LX transducers at any time without isolating the flow meter, shutting down the process or using any special tools. Together with the XMT1000 electronics and LX transducer, the uniquely designed meter body provides a clean and compact flow meter system.

Transit time flow measurement

# Overall Operation and Performance

#### **Fluid Types**

Liquids: acoustically conductive fluids, including most clean liquids, and many liquids with small amounts of entrained solids or gas bubbles. Maximum void fraction depends on transducer, interrogation carrier frequency, path length, and pipe configuration.

#### **Flow Measurement**

Correlation transit time model

#### Accuracy

- ±0.25% of reading for velocities above 1.6 ft/s (0.5 m/s)
- ±1.25 mm/s for velocities below 1.6 ft/s (0.5 m/s)

Accuracy statement assumes measurement of a single phase homogenous liquid with a fully developed symmetrical flow profile passing through the meter (typically 10 diameters upstream and 5 diameters downstream of straight pipe run). Applications with piping arrangements that create an asymmetrical flow profile may require extended piping straight runs and/ or flow conditioning for the meter to perform to this specification.

#### Calibration

All meters are water calibrated and include a calibration certificate.

#### Repeatability

±0.15% of reading

#### **Range (Bidirectional)**

-82 to 82 ft/s (-25 to 25 m/s)

### Meter Body/Transducer System

#### **Meter Body Materials**

Carbon steel: ASTM SA216 Gr. WCB Stainless steel: ASTM SA351 Gr. CF8M Low temperature carbon steel: ASTM SA352 Gr. LCB Duplex stainless steel: ASTM SA995 GR. CD3MWCuN

#### **Transducer System and Material**

LX transducers with inserts 316L SS or A479 UNS S32760 (Duplex) Wetted components Seals: FKM or EPDM

#### **Process Fluid Temperature Range**

Local mount: -40°F to 185°F (-40°C to 85°C) Remote mount: -40°F to 302°F (-40°C to 150°C)

#### **Pressure Range**

Up to maximum allowable flange operating pressure at temperature per ASME B16.5 or EN1092-1

#### **Piping Design**

ASME B31.3 NACE MR0103/MR0175 PED PER B31.3, CAT II, A2 CRN

#### Weights and Dimensions

See Drawings 712-2166 (Local Mount) and 712-2167 (Remote Mount) for details.

Drawing	Drawing Description	
712-2166	Outline & installation, Z3, 2 – 24 in. flowmeter system, local mount	
712-2167	Outline & installation, Z3, 2 – 24 in. flowmeter system, remote mount	

# **Electronics**

#### **Enclosures**

Powder coated aluminum or stainless steel (SS316)

#### Classifications

US/CAN: Class I, Division 1, Groups B, C, D; Class I, Zone 1, Ex d IIB+H2 T6...150C; ATEX/IECEx: Ex d IIB+H2 T6...150C FISCO outputs Ta = -40°C to +60°C, Type 4X SINGLE SEAL

#### **Electronics Mounting**

Local or remote mounting

**Paths** Three paths

#### Display

English 128 x 64 mono-color LCD display, configurable for single or dual measurement parameters

#### **Keypad**

Built-in magnetic, six-button, lockable keypad

#### **Standard Inputs/Outputs**

- One 4 to 20 mA isolated output, 600 Ohm maximum load
- One additional output, may be configured as either a pulse or frequency output.

#### Digital Interfaces

Standard: RS485/Modbus® Optional: HART® 7.0 protocol, with 4 dynamic variables, includes one additional 4 to 20 mA analog output NAMUR NE43 Optional: Foundation Fieldbus® FISCO, LAS capable NAMUR NE107 with 5 Al blocks and a PID block

#### **Power Supplies**

Universal 100-240 VAC 50/60 Hz ±10% or 12 to 28 VDC

#### **Cable Entries**

<sup>3</sup>⁄4" NPT M20 Adapters

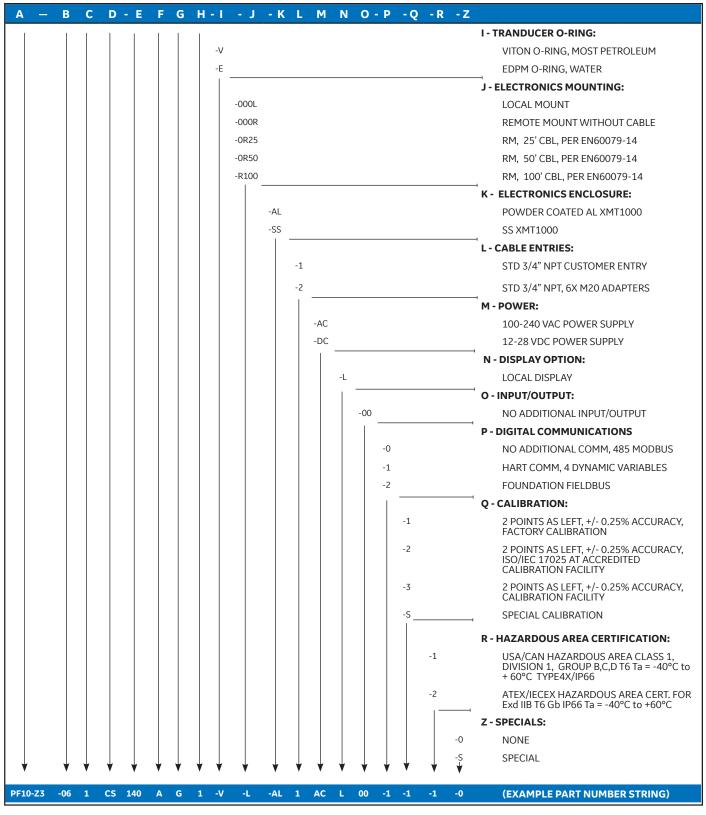

#### **Temperature Range**

Operating: -40°F to 140°F (-40°C to +60°C) Storage: -40°F to 158°F (-40°C to 70°C)
