

Flow Measurement

SITRANS FX

SITRANS FX300

Overview

SITRANS FX vortex flowmeters provide accurate volumetric and mass flow measurement of steam, gases and liquids as an all-in-one solution with integrated temperature and pressure compensation.

Benefits

- All devices have 2-wire technology and HART communication
- Temperature compensation for saturated steam as standard feature
- Integrated temperature and pressure measurement enabling direct compensation of density
- Pressure, temperature and flow can be read at a single point. No additional installation of pressure and temperature sensors
- Direct measurement of energy or energy consumption
- Optimum process reliability thanks to Intelligent Signal Processing (ISP) - stable readings, free of external perturbations
- Fully welded stainless steel construction with high corrosion, pressure and temperature resistance
- Maintenance-free sensor design
- Ready to use due to plug & play feature. No additional cabling work
- Minimal pressure drop
- Compact or remote design
- Pressure and temperature compensation for fluctuating volume flows
- Measurement of consumption in compressed air systems
- No risk of deposits or damage (sensor in the turbulent area)
- All units parameterized prior to delivery

Application

The SITRANS FX300 is a flowmeter in a single or dual transmitter version, suitable for measuring industrial steam, gases, as well as conductive and non-conductive liquids, e.g. steam (saturated steam, superheated steam), industrial gases (compressed air, nitrogen, liquefied gases, flue gases), and conductive and non-conductive liquids (demineralized water, boiler feed water, solvents, heat transfer oil).

The main applications of SITRANS FX300 can be found in the following sectors:

- Chemical
- Petrochemical
- Oil & Gas
- Power plants
 - Air
 - Heating
 - Cooling
 - Chilling
- Food & beverage
 - Pharmaceutical
 - Sugar refineries
 - Dairies
 - Breweries
 - Production of soft drinks
- Refining
- Water & waste water

System Overview

Design

The unit is available in a compact or a remote version with up to 15 meter distance from flowmeter to transmitter. When ordering a remote version the transducer cables are pre-mounted and ready for installation.

Function

Operating Principle

SITRANS F X vortex flowmeters measure flow rate by detecting the frequency at which alternating vortices are shed from a bluff body inserted into the flow stream. This principle of measurement is known as Von Karman's vortex street principle: alternating vortices form behind an object in a stream. The frequency of the alternating vortices is proportional to the flow rate. The passage of a vortex causes a slight stress on a pick-up placed downstream of the bluff body. The stress is picked up and counted as pressure surges by a dual Piezo crystal placed inside the wing.

① = Bluff Body, ② = Pick-up

The flowmeter calculates the flow velocity using the following equation:

$$Q = A \cdot V = A \cdot d / St \cdot f = 101.93 \cdot f / K \text{ [m}^3/\text{h]}$$

Where:

Q = flow rate [m^3/h]

f = vortex shedding frequency [Hz]

K = calibration constant [pulses/ m^3]

d = width of the bluff body [m]

St = Strouhal Number

A = cross-section area [m^2]

V = flow velocity [m/s]

Requirements

In order to generate the vortex streets, the medium must have a minimum velocity:

- For steam and gases, the flow velocity must be 2 to 80 m/s (6.6 to 262 ft/s)
- For liquids the flow velocity must be 0.4 to 10 m/s (1.3 to 32.8 ft/s)

Design

SITRANS FX300 volumetric and mass flowmeter is available in the following configurations:

SITRANS FX300 Single transmitter

The single transmitter is available as a flange or sandwich solution in the following versions:

- Vortex standard flowmeter

Measurement with integrated temperature sensor as standard feature

- Vortex flowmeter with pressure sensor

Measurement with integrated temperature and pressure sensors for compensation of gases, wet gases, gas mixtures or steam (for energy measurement).

- Vortex flowmeter with pressure sensor and isolation valve

Allowing the pressure sensor to be shut off for the purpose of pressure or leak testing of the pipeline or for being exchanged without interrupting the process. Using the built-in two-way valve, the pressure sensor can also be calibrated and tested at a later time.

- Vortex flowmeter - remote version

Sensors and transmitters mounted separately. The device is equipped with temperature sensor (standard), pressure sensor (optional) and isolation valve (optional) providing all the features of the compact mounted version.

SITRANS FX300 Dual transmitter

This is a genuine redundant system with two independent sensors and two transmitters providing twofold functional reliability and availability of the measurement. This variant is optimally suited for measurements in multi-product pipelines.

The dual converter is available as:

- Vortex standard flowmeter

Measurement with temperature sensor for saturated steam compensation as standard feature

Without pressure sensor										
Software										
Uncompensated for gases, wet gases, steam and liquids respectively temperature compensation for saturated steam										
Selection and Ordering data										
Additional information										
Please add "-Z" to Article No. and specify as minimum Order code Y40, Y41, Y42 and Y45 and plain text.										
Input process data										
Medium: Specify steam, gas, liquid and customised					Y40					
Temperature: Specify max. operating temperature and units					Y41					
Pressure: Specify max. operating pressure and units					Y42					
Density (only by customer-specified medium): Specify medium density and units					Y43					
Viscosity (only by customer-specified medium): Specify medium viscosity and units					Y44					
Flow rate: Specify min./max. flow rate and units					Y45					
Setting of pulse output: Specify totalizer or energy unit (1 pulse/unit)					Y47					
Relative humidity (amount in % of process medium)					Y49

This device is shipped with a Quick Start guide and a CD containing further SITRANS F literature.										
All literature is also available for free at: http://www.siemens.com/flowdocumentation										
Selection and Ordering data					Order code					
Further designs										
Please add "-Z" to Article No. and specify Order code.										
Converter housing material										
Aluminum for increased requirement, color: petrol green					A10					
Material certificate										
Certificate of compliance EN 10204-2.1					C10					
Pressure test + 3.1 accordance EN 10204					C11					
Material certificate pressure parts + certificate 3.1					C12					
Material in accordance with NACE MR 0175-01					C13					
PMI of pressure bearing metal parts + certificate 3.1					C14					
Material certificate pressure parts + PMI/certificate 3.1					C15					
Calibration certificate FX300										
As standard the flow device has a 3-point calibration certificate.										
Calibration certificate (5-point)					D11					
Hardness test										
Hardness test on pressure bearing parts + 3.1 Equotip LD procedure according to NACE MR 0175-01					H30					
Cleaning for oil and fat										
Class 1 increased requirement (customer-specified) and 3.1 (EN 10204)					K46					
Class 2 and 3.1 (EN 10204)					K48					
Certificates										
X-ray test on pressure bearing weldings					M56					
Dye penetration test on pressure bearing weldings					M58					
Tag name plate										
Stainless steel tag with 3 mm characters, max. 2 x 8 characters (40 x 20 mm, add plain text)					Y17					
Stainless steel tag with 2.5 mm characters, max. 8 x 40 characters (120 x 46 mm, add plain text)					Y18
